Sudhir Kumar Mohapatro

Principle Software Engineer

With over 16+ years of professional IT experience, I bring a wealth of expertise in designing both low-level and high-level architectures for a wide range of applications. I am well-versed in utilizing essential design tools like draw.io, Confluence Gliffy diagrams, and other collaborative platforms to create comprehensive and visually compelling design documentation.

Objective

Seeking a challenging role as a Technical Architect where I can leverage my expertise in architecture and technology to drive organizational success. My goal is to enhance the organization's success while continuously developing my skills in a dynamic and innovative environment.

Summary

- Proficient in a diverse array of domains, platforms, and environments. Adept in the complete software development lifecycle, from modeling and design to architecture, implementation, and optimization.
- Specialized in server-side programming, utilizing Servlets, JSP, JDBC, and exhibiting substantial
- Experience with STRUTS Framework, SPRING Framework (IOC, AOP), JSF, and Hibernate.
- Skilled in Rest Frameworks, including Apache CXF, WSO2 ESB, and Spring Rest.
- Proficiency in front-end technologies such as Ext JS, JSF Prime faces, TypeScript, Angular, and React.
- Hands-on expertise with web servers like Tomcat Web Server and JBoss 4.0.4.
- Extensive experience in MVC Architecture and a keen focus on Microservices Architecture leveraging Spring Boot.
- Robust background in Multithreading and Object-Oriented Programming (OOP) development.
- In-depth knowledge of the Concurrency package.
- Adept in working with databases, including Oracle, MySQL, and PostgreSQL.
- Skilled in integration servers like Hudson and Jenkins.
- Proficiency with Site Reliability Engineering (SRE) tools, including Kibana, Elasticsearch, Prometheus, and Dynatrace, ensuring optimal system performance and reliability.
- Experience in message brokers like Kafka and RabbitMQ, facilitating seamless data streaming and communication within applications.
- Expertise in creating detailed low-level and high-level design diagrams using tools such as draw.io, Confluence Gliffy diagrams, and other collaborative platforms.
- Strong experience in containerization and orchestration with Docker and Kubernetes, ensuring scalable, portable, and efficient deployment of applications.
- Experienced with Git and proficient in version control workflows.

Address

#36, Bhoo Layout, Bangalore - 560077

Education

Advanced Diploma in Computer Applications
DOEACC, New Delhi, India 2006 - 2008

Postgraduate in Applied Economics
Berhampur University, Odisha 2003 - 2005

Experience

Principle Software Engineer
Dell Technologies Oct 2021 - Present

Tech Lead
Harman India Mar 2015 - Oct 2021

Associate Technical Consultant
ITC Infotech Nov 2011 - Dec 2014

Senior Software Engineer
ArisGlobal Nov 2010 - Nov 2011

Senior Software Engineer
Ness Technologies Nov 2009 - Nov 2010

Expertise

- System Design
- Java, JavaScript, TypeScript, Python
- Oracle, MySQL, and PostgreSQL, Casandra
- Ext js, Gwt, HTML, Bootstrap, Angular
- React, Redux, HTML5, CSS3, JavaScript (ES6+)
- Tortoise SVN, Git
- Jenkins, Docker & Kubernetes
- Jboss 4.04, Apache Tomcat
- Security System
- Kafka and RabbitMQ
- AWS & Pivotal Cloud Foundry
- Kibana, Elasticsearch, Prometheus, and Dynatrace
- Communication Skill

Projects Managed

Role : Full Stack Developer **Oct 2021 - Present**
Company : Dell
Project : APEX AIOps Infrastructure Observability

Tech Stack: Java, Python, SpringBoot, Microservices, Angular, TypeScript, React, Redux, Kafka, RabbitMQ, PostgreSQL, Casandra, Pivotal Cloud Foundry, Jenkins, Docker, Kubernetes, Kibana, Elasticsearch, Prometheus, and Dynatrace

CloudIQ enables customers to conduct monitoring and predictive analytics in a centralized location for their enterprise storage systems. The search function within CloudIQ facilitates the retrieval of diagnostic, configuration, and telemetry data.

Feature Ownership: I assume responsibility for the ideation and inception of new features within the software ecosystem. This involves actively participating in brainstorming sessions and discussions to identify opportunities for enhancements or new functionalities.
Feature Development: I take a hands-on approach to guide and shape the development process. This includes working closely with the development team to outline requirements, establish design principles, and define the technical roadmap for the feature.
Cross-Functional Collaboration: Collaboration is key in my role. I engage closely with the business team to fully understand their requirements, objectives, and vision for the feature. This ensures that the development aligns with business goals and user needs.
Technical Leadership: I provide technical leadership throughout the feature's development. This involves making critical decisions on architecture, technology stack, and development methodologies to ensure the feature is not only functional but also scalable, maintainable, and aligned with best practices.
Continuous Iteration: I oversee the iterative process of feature development, encouraging regular feedback and refinement. This helps in adapting to changing requirements and ensuring that the feature remains in line with evolving business needs.
Quality Assurance: I play a pivotal role in quality assurance by defining and overseeing testing strategies. This includes coordinating with QA teams to ensure comprehensive test coverage, debugging, and resolving issues promptly.
Delivery Focus: My ultimate responsibility is to shepherd the feature through its development lifecycle until it is successfully delivered to end-users or customers. This involves monitoring progress, mitigating risks, and ensuring that timelines are met.

Role : Tech Lead **Mar 2015 - Oct 2021**
Company : Harman India
Project : Harman Sales Portal

Tech Stack: Java 1.8, AWS, Spring (IOC, Aop, Rest), PostgreSQL, Git, Jenkins, Spring Boot, Microservices, Angular 6, WSO2 ESB

The Harman Sales Portal is their proprietary e-commerce platform created for selling their own lifestyle products and infotainment products.

- Leading a team in Software Development, taking charge of critical tasks such as analyzing functional specifications and meticulously creating comprehensive design documents.
- Managing multiple Microservices development efforts to ensure seamless and efficient project delivery, fostering a collaborative and high-performance team environment.
- Proficiently crafting Angular components using Angular CLI and TypeScript, contributing to the development of modern and user-friendly interfaces.
- Implementing Rest APIs with WSO2 ESB and Spring Rest, enhancing the robustness and scalability of our solutions.
- Actively involved in the strategic upgrading of applications to harness the power of the latest technologies, ensuring our systems remain cutting-edge.
- Demonstrating expertise in task estimation and effective team coordination, key components of successful project execution.
- Playing a pivotal role in the development of controllers, aspects for declarative transactions, and DAOs, contributing to the overall enhancement of system functionality.
- Engaged in continuous code improvement through refactoring, performance tuning, and conducting comprehensive code reviews to maintain and elevate code quality standards.

Role : Developer
Company : ITC Infotech **Nov 2011 -Dec 2014**

- Analyzed functional specifications, prepared design documents, and estimated tasks accurately.
- Developed system functionality, optimized performance, and implemented asynchronous server-side calls.
- Built intuitive user interfaces, ensured code reliability with TDD, and conducted proactive code reviews.

Role : Developer **Nov 2010 -Nov 2011**
Company : Aris Global

- Hands-on coding and development, actively contributing to project implementation.
- Conducting code refactoring and performance tuning to enhance code quality and system efficiency.
- Utilizing code profiling techniques to analyze and optimize software performance.
- Playing a key role in user interface development for various views, ensuring an optimal user experience.

Role : Developer
Company : Ness Technologies **Nov 2009 -Nov 2010**

- Coding and developing Servlets for efficient server-side request processing, coupled with creating corresponding views using JSP. I actively engage in requirement gathering and implement robust validation processes to ensure the reliability and integrity of the developed solutions
